

Food Science Student 4 Month term

Our mission is to develop a sustainable, plant protein company that builds long-term value for shareholders, stakeholders and for the rapidly growing wellness-conscious food consumer. We are proud of our part in the diversification of Alberta's economy. While Alberta produces almost half of the yellow peas grown in Canada, we have historically shipped them out of our province (and out of Canada) where a portion is processed into plant-protein. Phyto Organix is working to change that by building a processing plant which will keep this process in Alberta.

We have recently announced we are building our net zero emission protein facility in beautiful Strathmore, AB (approx. 40 km east of Calgary city limits). It is the largest single investment in Strathmore, and we are excited to become an employer of choice in the region.

What's the Role?

- Assist the R&D Team in testing new processes of extraction.
- Characterize our finished products in terms of functionality and nutritional values.
- Ensure quality and flavour of final product remains consistent
- Research, develop and test new food products using Phyto Organix pea protein isolate, starch and fibre
- Research ways to improve testing, preservation, packaging

We think you would be a great fit if you are:

- A 3rd or 4th year student in Food Science, Biochemistry or Microbiology with particular interest in plant-based food
- Excited to be a part of the first net zero pea processing facility in North America
- Excited to work in our kitchen (lab) to develop new food products
- Interested in growing your career by learning a new business from the ground up from experienced professionals who are keen to share their knowledge
- Someone with a deep sense of ownership and pride in your performance and its impact on the Company's success

Work will take place mainly at our Calgary office and our Calgary lab with occasional opportunities for remote work.

What do we bring?

Competitive base salary, excellent opportunity to learn a net zero business from the ground floor, flexible work environment, fun social events, a potential for field experience, and opportunities for future employment.

Does this sound like a good move for you? We'd love to hear from you at careers@phytoorganixfoods.com
